Glossary

L_{eq}	- Equivalent Continuous Sound Pressure Level. The total sound energy logged over the course of a measurement. (Uses logarithmic averaging).
L_{eq24}	- Measured over the entire 24-period (00:00 – 23:59)
L_{eqDay}	- Measured over the daytime period (07:00 – 22:00)
L_{eqNight}	- Measured over the nighttime period (22:00 – 07:00)
SPL (dBA)	- Sound Pressure Level in dBA (A-weighted, which is corrected for human hearing)
TSP	- Total Suspended Particulate Matter. Includes particulates with a diameter of greater than 10 micrometers and smaller.
PM_{2.5}	- Particulate Matter with a diameter of 2.5 micrometers and smaller.

1.0 SOUND LEVEL MEASUREMENT RESULTS

The results of the sound monitoring at the STAR Pit can be found in Table 1. Table 1 provides the daily averaged L_{eq24} , L_{eqDay} and $L_{eqNight}$ sound levels in addition to the minimum and maximum L_{eq24} values.

Table 1. June 2025 – STAR PIT – Sound Monitoring Results¹

Monthly Minimum	38.5	31.5	39.3	41.0	36.7

¹ It should be noted that all measured sound levels provided in Table 1 are for instances in which the wind speeds were below 11 km/hr and rainfall was below 3mm/hr, as both conditions will impact the validity of the measured results. As such, blank spaces indicate time periods/days in which there is no valid data due to wind/rain.

Figure 1 provides the graphical representation of the results found in Table 1. Figure 2 illustrates the hourly average, maximum and minimum L_{eq} dBA values for the entire month. In addition, the City of Calgary's Community Standards Bylaw values have been included.

It is important to note that the monitoring stations are located inside the perimeter berms, adjacent to operations and not beyond the site boundaries. Measurements are intended to help monitor and measure the internal operations performance and are not representative of the lower offsite levels.

Figure 1. STAR PIT – June 2025 – Daily Sound Monitoring Results

Figure 2. STAR PIT – June 2025 – Hourly Sound Monitoring Summary

2.0 SOUND LEVEL EXCEEDANCES

As per the development permit, the permissible sound level for this site is 50 dBA $L_{eq-1\text{Hour}}$ for the nighttime and 65 dBA $L_{eq-1\text{Hour}}$ for the daytime hours. As shown in Table 2, from June 1 to June 30, 2025, there were 61 exceedances. All exceedances occurred during the nighttime.

Table 2. STAR PIT – June 2025 – Sound Level Exceedances

Date	$L_{eq-1\text{-hour}}$ (dBA)	Wind Speed (Km/hr)	Temperature (°C)	Wind Direction	Hourly Rainfall (mm)	Day/Night

3.0 PARTICULATE RESULTS

As per development permit the air quality threshold values of particulate matter for this site are of 100 µg/m³ for TSP Daily, 29 µg/m³ for the PM2.5 Daily and 80 µg/m³ for the PM2.5 Hourly. As shown in Table 3, there were exceedances at various times throughout the month however, these exceedances can be attributed to smoke from wildfires. This was reflected for all parameters and stations.

Table 3. STAR PIT – June 2025 – Particulate Results

Date	TSP Daily Average	PM2.5 Daily Average	CRAZ NW PM2.5	PM2.5 Hourly Max

4.0 METEOROLOGICAL DATA

4.1 TRAILER

As indicated in Table 4 & Figure 5, the primary wind direction for June 2025 varied and was from both the east and west. Wind speeds were relatively high and consistently between 8 – 24 km/hr. The monthly values for the temperature and precipitation can be found in Table 5.
